Agile: Retrospective

What went well?

- Great teamwork and collaboration.
- Effective communication.
- The team worked in parallel on multiple tasks and finished all of them.
- Estimated a range of hours we worked with everyday
- scrum was initiated as team members were communicating via messages and initiated 2 different sprints
- time management worked well

What didn't?

- Testing took longer than anticipated.
- burndown charts was not in absolute sync with the trello board.
- Some pages were delayed like admin orders page.
- difficulty in identifying the suitable aspect (functionalities,pages,time)
- The full potential of scrum was not reached as we divided up the eight member team to members of 2 responsible for a subset of tasks Due to the fact that there was common data between each page.

What could we do differently?

- Automate testing to reduce cycle time.
- work with agile xp as the project was small so pair programming would've made more sense in this case.
- divide up each page to small subtasks so that we could improve collaboration.
- make better diagrams so all of the team could be on the same page from the start.
